Principles for Digital Development

4 QUALITY EDUCATION

Tangerine

Tangerine is an open source software application designed to collect and analyze reading and mathematics assessment data in primary schools. Data can be reviewed on an individual student level, at the school level, or at the regional and even national level through three different platforms. The data gathered and used by teachers, coaches, and ministry officials helps these actors design more effective and targeted education interventions, as gaps and trends can more easily be recognized and addressed.
